

FIRSTPOINT COMPASS

YOUR SOLUTION FOR MULTIPLE DATA STREAMS

- Read and store data from multiple sources and direct it in specified formats to numerous destinations: billing, CIS, engineering, distribution planning, operations, and client support services.
- A stand-alone system with fully integratable modules
- Profit from easy access to the system for all users on a network – the job of adding customers, operators and customer service agents is simple, economic and efficient.
- Rely on FirstPoint's team of energy professionals to install COMPASS and train your staff to operate the system.
- Think big with COMPASS' Oracle database and Sun Servers – system ensures highly scalable projects with capacity for millions of monitored points.

DIRECT THE DATA YOUR WAY

- Utilities have specific data for forecasting and scheduling that helps electric power suppliers avoid storage costs associated with over-generation of power and brown-outs caused by under generation.
- Customers are able to integrate billing data with virtually all legacy and packaged systems, realizing faster revenue returns.
- Planners meet requirements for resource efficiencies, deregulation and mergers/acquisitions, and realize new opportunities for creating revenue, such as value-added products and services for end-use customers, energy service providers (ESPs) and energy services companies (ESCOs.)
- Aggregators turn interval data into valuable time-of-use information.
- Energy marketers and retailers can accurately calculate delivery charges.
